

Ungani 6H - Weekly drilling report

Buru Energy Limited (Buru Energy) provides the following update on operations at the Ungani 6H well as at 0600 hours Tuesday 11 June 2019.

Since the last report the well has been drilled ahead in 171 mm (6 3/4 inch) hole to a measured depth of 2,358 metres, prognosed to be immediately above the Ungani Dolomite reservoir section. The current operation is conditioning the hole prior to completing drilling to the reservoir section and running 5-1/2 inch (140mm) casing.

Once the casing job is completed the rig will then be moved to drill and case the equivalent pre-reservoir section on Ungani 7H.

Following the completion of the Ungani 7H drilling and casing operations the coil tubing drilling package will be mobilised to drill the respective underbalanced horizontal reservoir sections in the Ungani 6H and Ungani 7H wells.

The weekly drilling progress report for the well is attached.

Qualified Petroleum Resources Evaluator Statement

Except where otherwise noted, information in this release related to exploration and production results and petroleum resources is based on information compiled by Eric Streitberg who is an employee of Buru Energy Limited. Mr Streitberg is a Fellow of the Australian Institute of Mining and Metallurgy and the Australian Institute of Company Directors, and a member and Certified Petroleum Geologist of the American Association of Petroleum Geologists. He has over 40 years of relevant experience. Mr Streitberg consents to the inclusion of the information in this document.

Weekly Well Operations Report – Ungani 6H

Permit	The Ungani 6H well is located in Production License L20 in the Canning Basin of northwestern Australia, 97 kms east of Broome. The surface location is some 160 metres north of the Ungani 1ST1 well and immediately adjacent to the Ungani Production Facility.
Well Surface Location	Latitude: 17° 59' 20.4"S Northing: 8,011,024 mN Longitude: 123° 09' 50.7"E Easting: 517,373 mE
Buru Energy's Interest	Buru Energy Limited holds 50% interest in the well and L20 and is the operator.
Date of Progress Report	11 June 2019 (AWST)
Current Depth	Measured depth of 2,358 metres
Commencement Date	4 May 2019
Days Since Commencement	38 days
Target Formation	The well is a horizontal development well in the Ungani Dolomite reservoir of the Ungani Oilfield.
Operations Since Last Progress Report	Since the last report the well has been drilled ahead in 171 mm (6 3/4 inch) hole to a measured depth of 2,358 metres, prognosed to be immediately above the Ungani Dolomite reservoir section. The current operation is conditioning the hole prior to completing drilling to the reservoir section and running 5-1/2 inch (140mm) casing.
Hydrocarbons Indications	None – None expected.
Forward Operations	Once the casing job is completed the rig will then be moved to drill and case the equivalent pre-reservoir section on Ungani 7H.
