## **ASX ANNOUNCEMENT (ASX: BRU) 25 September 2009**

### **Completion of 2D seismic in Canning Basin**

---

Buru Energy Limited ("**Buru**") is pleased to announce that Terrex Seismic successfully completed the Paradise 2D Seismic Survey ("**Paradise Survey**") on 24 September 2009.

The Paradise Survey comprised 9 seismic lines over approximately 103 kilometres in Exploration Permits EP 371 and EP 428. The Paradise Survey was designed to complement 495 kilometres of 2D seismic data acquired by ARC Energy Limited in 2007 and will enable Buru to better assess the geological risks associated with the Paradise structure and confirm a drill location for the prospect.

The Paradise prospect is targeting oil and gas in the Carboniferous Anderson Formation and Upper Laurel Formation. There are several secondary targets to the south-east of the Paradise structure which will be investigated with this survey, including a possible Anderson Formation target, which had significant oil shows in the Valhalla-ST1 well drilled by ARC Energy Limited.

Subject to the Paradise Survey results, Buru securing a suitable rig and obtaining regulatory approvals, Buru expects the Paradise 1 well to be drilled in mid 2010 to assess an Anderson Formation oil target and one of the shallower gas targets in the Upper Laurel Formation.
